The Liquid Concrete Air Band

Liquid Concrete Air Band Basics

who? you and everyone there
what? it's a big loud noise jam
why? to experience harmony in chaos
when? next event is on Leap Year Day,
February 29, 2004, sundown to midnite
where? at the Otherworld in West Oakland.

Online documentaion of previous LCAB events, including mp3s and photos: <http://www.terboted.com/lcab/lcab.html>

If you are planning an installation, you may discuss your plans or RSVP via email to: terbo@spaz.org

instruments previously used at Liquid Concrete Air Band events include: tape decks, televisions, microphones, contact mics, homemade electronics, computers, guitars, basses, drums, violins, cello, effects units, amplifiers, samplers, synthesizers, scrap metal, steel drums, turntables, mixers, radio transmitters, sequencers, flutes, wind instruments, video projectors, movie controllers, smoke alarms, radios, alarm clocks, video games, oscillators, harmonica, piano and more.

Earplugs, drumsticks and a flashlight are good things to have at a Liquid Concrete Air Band show. Documentation of all kinds is encouraged. There is no centralized soundsystem, stage, schedule or song structure at the events; the performance slowly builds in waves over hours into a dense harmonic wall of sound that gradually dissipates as the performers eventually leave the venue. A good way to describe the less intense moments of audio would be the sound of a drum circle over feedback in a video game arcade. Recordings of peak moments tend to sound like hiss with no articulation.

The Liquid Concrete Air Band is an interactive audio visual noise orchestra. Anyone in attendance at one member of the group. Participants are encouraged to set up interactive installations for group experimentation. The first LCAB event was in 1993, and there have been six shows over a ten year span, including events on Leap Year Day in 1996 and 2000, with the 7th performance scheduled for Leap Year Day, February 29th, 2004.
